Sowing instructions

Aubergine

Indoor sowing: february - april

Germination: 10 - 20 days

Germination temp: 21 - 25°C

Sowing depth: 1 cm

Transplanting when the seedlings are approx. 7,5 to 10 cm tall

Plant spacing: 50 - 75 cm

Planting position: Sunny/greenhouse

Days till harvest: 60 - 65

Sow indoors from february on 2 seeds per individual pot 1 cm deep in good sowing soil. Keep at approx. 21-25 °C. Keep moist, warm and light.

Transplant the seedlings when they are about 7 - 10 cm tall in bigger pots. Aubergine doesn't tolerate cold, so keep them in a hothouse or a warm glasshouse or outdoors on a very warm, sunny and sheltered plot on the southside. Keep moist, pest free and give each plant good support.

To aid fruit development, water regularly and provide a potassium rich liquid fertilizer with each watering. Harvest the fruit by picking them regularly and before the fruit surface shine fades.
