Sowing instructions

Dry Beans

Indoor sowing: April

Outdoor sowing: mid-May - June

Germination: 7-14 days

Germination temp.: 18 - 22°C

Sowing depth: 3 - 4 cm

Plant distance: 10 cm

Sowing distance in rows: 40 - 50 cm

Plant position: sunny

Harvest period: August- October

Sow indoors in individual pots about 3-4 cm deep for an early harvest from April on. Cover the seeds with a thick layer of soil because these are dark germinators. Keep moist and warm. Plant the seedlings on a warm, sunny and sheltered plot from mid may on, when there's no longer any danger of night frosts. Keep 40 - 50 cm apart. Keep moist and weed free.

Sow outdoors on a sunny, sheltered plot from mid-May, when there's no longer any danger of night frosts. Cover the seeds with a thick layer of soil. Beans don't tolerate cold soil. Sow them warmed up soil. This variety doesn't need support. Fertilize the plant when it flowers. Let the harvested pods dry outdoors in the sun till they are dry and brown. Remove the inside beans to eat them. These beans can be stored for a couple of months. Soak them about 8 hours before cooking them. Protect against birds with nets.
